ESD Precautions

Computer boards have integrated circuits sensitive to static electricity. To prevent chipsets from electrostatic discharge damage, please take care of the following jobs with precautions:

- Do not remove boards or integrated circuits from their anti-static packaging until you are ready to install them.
- Before holding the board or integrated circuit, touch an unpainted portion of the system unit chassis for a few seconds. It discharges static electricity from your body.
- Wear a wrist-grounding strap, available from most electronic component stores, when handling boards and components.

Introduction

The MANO566 Mini-ITX motherboard supports the new Intel 7 14th/ 13th/ 12th Generation Intel® Core™ i9/ i7/ i5/ i3 (65W CPU) and Pentium® processors in LGA1700 package. Featuring the new Intel® H610, Q670E, R680E Express chipset with two DDR5 5600MHz memory support, this motherboard is built to perform best stability and reliability for industrial applications.

It comes with two SATA 3.0, four USB 3.2, four USB 2.0 and four serial ports providing robust storage and I/O options. Users also can increase board functionality with PCI-Express x16 and M.2 slot. The high quality MANO566 allows max. four display interfaces via eDP, DisplayPort++ and two HDMI(DP is optional), making it an ideal solution for gaming, workstation, digital signage, medical and other IoT&M2M applications.

1.1 Features

- LGA1700 Socket for 14th/ 13th/ 12th Generation Intel® Core™ i9/ i7/ i5/ i3 processors and Pentium® processor (up to 65W) (Alder Lake-S)
- 2 DDR5-5600MHz memory with maximum capacity up to 96 GB
- 1 PCI-Express x16(Gen4)
- 1 M.2 Key E 2230 for WiFi (support PCIE(Gen3) x1, USB 2.0 signal)
- 1 M.2 Key M 2280 for NVMe storage (support PCIE(Gen3) x4 signal)
- 2 SATA-600 support RAID 0/1.
- 4 USB 3.2 and 4 USB 2.0
- TPM 2.0 (optional).

1.2 Specifications

- **CPU**
 - LGA1700Socket for 14th/ 13th/ 12th Generation Intel® Core™ i9/ i7/ i5/ i3 processors and Pentium® processor (up to 65W CPU).
- **Chipset**
 - Intel® H610
 - Intel® Q670E
 - Intel® R680E
- **BIOS**
 - AMI BIOS via SPI interface.
- **System Memory**
 - Two 262-pin SO-DIMM sockets.
 - Supports up to 48GB per DIMM, with a maximum total memory capacity of 96GB using two DIMMs.
 - Support 4800/5200/5600 MHz.
- **Onboard Multi I/O**
 - Controller: F81966
 - Four serial ports:
 - COM1~2 with RS-232/422/485 by BIOS selectable (Rear I/O)
 - COM3~4 with RS-232 (2x5P 2.0mm box header)
- **USB Interface**
 - Four USB 3.2 Ports (on the rear I/O).
 - R680E / Q670E: 4 ports USB3.2 Gen2x1
 - H610 : 2 ports USB3.2 Gen2x1(CN17) + 2 ports USB3.2 Gen1x1(CN18)
 - Four USB 2.0 Ports via 2x5 pin 2.0mm wafer (internal).
- **Ethernet**

Two 2500/1000/100/10Mbps Gigabit/Fast Ethernet support Wake-on-LAN, PXE via Intel® I226-V (H610 & Q670E SKU) and Intel® I226-LM. (R680E SKU)
- **Serial ATA**
 - Two SATA 3.0 ports (6Gb/s).
- **Audio**
 - Realtek ALC888 HDA codec.
 - Support MIC-in/line-out (on the rear I/O).
 - Support MIC-in/line-out/line-in in box header (internal).
- **Display**
 - Two HDMI 1.4b connector in wafer connector. Resolution max. up to 4096x2160@30Hz.
 - One DisplayPort++ with resolution max. up to 4096x2160 @60Hz. (Optional)
 - One Embedded DisplayPort (eDP) with resolution max. up to 4096x2160@60Hz.
- **Expansion Interface**
 - One PCI-Express(Gen4) x16 slot.
 - One M.2 key M slot (support PCIE x4 signal).
 - One M.2 Key E slot (support PCIE x1, USB 2.0 signal).
 - One M.2 Key B slot (support PCIE x1, USB 3.2 signal) (Optional)
- **Power Input**

- One ATX power input connector.
- One 12V ATX power input connector for CPU power.

- **Operating Temperature**
 - 0°C ~ 60°C.

- **Storage Temperature**
 - -20°C ~ 65°C.

- **Form Factor**
 - Mini ITX (6.7" x 6.7", 17.0cm x 17.0cm).

Note

All specifications and images are subject to change without notice.

1.3 Utilities Supported

- Chipset driver
- Graphics driver
- Intel ME driver
- Ethernet driver
- Serial IO driver
- Intel RST driver
- Intel DTT driver
- Intel GNA driver (13th/14th support only)

Board and Pin Assignments

2.1 Board Layout

Top View

Rear I/O

**Note**

To identify the first pin of a header or jumper, please refer to the following information:

- Usually, there is a thick line or a triangle near the header or jumper pin 1.

2.3 Jumper and Switch Settings

Jumper is a small component consisting of jumper clip and jumper pins. Install jumper clip on 2 jumper pins to close. And remove jumper clip from 2 jumper pins to open. The following illustration shows how to set up jumper.

Before applying power to MANO566 Series, please make sure all of the jumper and switch are in factory default position. Below you can find a summary table of jumper, switch and onboard default settings.

**Note**

Once the default jumper and switch settings need to be changed, please do it under power-off condition.

Jumper	Description	Setting
JP1	Auto Power On Default: Disable	2-3 Close
JP4	EDP VDD Select Default: +3.3V	1-2 Close
SW1	Clear CMOS Default: Normal Operation	Release

2.3.1 Auto Power On (JP1)

If JP1 is enabled for power input, the system will be automatically power on without pressing soft power button. If JP1 is disabled for power input, it is necessary to manually press soft power button to power on the system.

Function	Setting
Enable auto power on	1-2 close
Disable auto power on (Default)	2-3 close

2.3.2 EDP VDD Select (JP4)

The motherboard supports voltage selection for embedded DisplayPort (eDP). Use this jumper to set up VDD power of the eDP connector. To prevent hardware damage, before connecting please make sure that the input voltage of display panel is correct.

Function	Setting
+3.3V (Default)	1-2 close
+5V	2-4 or 4-6 close
+12V	5-6 close

2.3.3 Clear CMOS (SW1)

This switch allows you to clear the Real Time Clock (RTC) RAM in CMOS. You can clear the CMOS memory of date, time, and system setup parameters by erasing the CMOS RTC RAM data. The onboard button cell battery powers the RAM data in CMOS, which includes system setup information such as system passwords.

To erase the RTC RAM:

1. Turn OFF the computer and unplug the power cord.
2. Remove the onboard battery.
3. Press the tact switch for at least 1 second.
4. Re-install the battery.
5. Plug the power cord and turn ON the computer.
6. Hold down the key during the boot process and enter BIOS setup to re-enter data.

Function	Setting
Normal (Default)	Release
Restore BIOS optimal defaults	Press

2.4 Connectors

Signals go to other parts of the system through connectors. Loose or improper connection might cause problems, please make sure all connectors are properly and firmly connected. Here is a summary table showing connectors on the hardware.

Connector	Description
CN1, CN2	Fan Wafer Connectors
CN3, CN4	ATX Power Input Connectors
CN5, CN6	USB 2.0 Wafer Connectors
CN7	M.2 Key M Connector
CN8	M.2 Key E Connector

SCN2	eDP Connector

2.4.1 Fan Connectors (CN1 CPU Fan and CN2 SYS Fan)

The motherboard has two 4-pin (pitch=2.54mm) fan connectors. You can find fan speed option within BIOS Setup Utility if fan is installed. For further information, see BIOS Setup Utility: Advanced\Hardware Monitor\PC Health Status in section 4.4.

Pin	Signal
1	GND
2	+12V
3	FAN Speed Detection
4	FAN Speed Control

2.4.2 ATX Power Input Connectors (CN3 and CN4)

Steady and sufficient power can be supplied to all components on the board by connecting power connector. Please make sure all components and devices are properly installed before connecting the power connector. Loose connection may cause system instability.

External power supply plug fits into the connector in only one orientation. Properly press down power supply plug until it completely and firmly fits into this connector. Loose connection may cause system instability.

CN3: 8-pin connector for +12V DC power input.

Power LED

Pin 1 connects LED+ and pin 5 connects LED-. The power LED lights up when the system is powered on.

External Speaker and Internal Buzzer

Pin 2, 4, 6 and 8 connect the case-mounted speaker unit or internal buzzer. While connecting the board to an internal buzzer, please set pin 2 and 4 closed; while connecting to an external speaker, you need to set pins 2 and 4 opened and connect the speaker cable to pin 8(+) and pin 2(-).

Power On/Off Button

Pin 9 and 10 connect the power button on front panel to the board, which allows users to turn on or off power supply.

System Reset Switch

Pin 11 and 12 connect the case-mounted reset switch that reboots your computer without turning off the power switch. It is a better way to reboot your system for a longer life of system power supply.

HDD Activity LED

This connection is linked to hard drive activity LED on the control panel. LED flashes when HDD is being accessed. Pin 13 and 14 connect the hard disk drive to the front panel HDD LED, pin 13 is assigned as cathode(-) and pin 14 is assigned as anode(+).

2.4.7 Nano SIM Socket (CN10) (Optional)

The motherboard is equipped with CN10 socket for inserting SIM Card. This function is not available in the standard model(H610 SKU/Q670E SKU), but it is offered as an optional feature. Please contact your sales representative for more information.

2.4.9 M.2 Key B Connector (CN13) (Optional)

The motherboard comes with one M.2 Key B connector suitable for mounting SATA/PCIE storage card, or USB 3.2 and USB 2.0 application card. This function is not available in the standard model(H610 SKU/Q670E SKU), but it is offered as an optional feature. Please contact your sales representative for more information.

2.4.12 LAN and USB 3.2 Ports (CN17 and CN18)

The motherboard comes with two high performance plug and play Ethernet interfaces (RJ-45) which are fully compliant with the IEEE 802.3 standard. Connection can be established by plugging one end of the Ethernet cable into this RJ-45 connector and the other end to a 2500/1000/100/10 Base-T hub.

* Only CN17 with R680E SKU supported Intel AMT(Active Management Technology)

The Universal Serial Bus (compliant with USB 3.2) connectors on the rear I/O are for installing USB peripherals such as keyboard, mouse, scanner, etc.

* **R680E / Q670E**: 4 × USB 3.2 Gen2x1 ports

* **H610E**: 2 × USB 3.2 Gen2x1 ports (CN17) + 2 × USB 3.2 Gen1x1 ports (CN18)

2.4.15 COM Double-deck D-Sub Connector (CN21)

The CN21 is a double-deck D-Sub connector for COM1 and COM2 serial port interfaces. Both COM1 and COM2 are selectable for RS-232/422/485 mode by BIOS setting (see section 4.4). The pin assignments of RS-232/422/485 are listed in table below. (Maximum baud rate 115200bit/s)

COM1 and COM2:

2.4.16 HDMI Type-A Connector (CN22)

The HDMI (High-Definition Multimedia Interface) is a compact digital interface which is capable of transmitting high-definition video and high-resolution audio over a single cable.

Section 3

Hardware Description

3.1 Microprocessors

The MANO566 Series supports 14th/ 13th/ 12th Generation Intel® Core™ i9/ i7/ i5/ i3 processors and Celeron / Pentium® processor, which enable your system to operate under Windows® 10/ 11 and Linux environments. The system performance depends on the microprocessor. Make sure all correct settings are arranged for your installed microprocessor to prevent the CPU from damages.

3.2 BIOS

The MANO566 Series uses AMI Plug and Play BIOS with a single SPI Flash.

3.3 System Memory

The MANO566 supports two 262-pin DDR5 SO-DIMM sockets for maximum memory capacity up to 96GB DDR5 SDRAMs. The memory module comes in sizes of 8GB, 16GB, 32GB, 48GB, 64GB and 96GB.

Note

- *For single memory channel configuration, install memory module in channel A (DIMM1) DDR5 SO-DIMM socket, maximum 48GB per module.*
- *For dual memory channel configuration, install memory modules of the same size, chip width, density and rank in both channel A (DIMM1) and channel B (DIMM2) DDR5 SO-DIMM sockets, maximum 96GB per module.*

Section 4

AMI BIOS Setup Utility

The AMI UEFI BIOS provides users with a built-in setup program to modify basic system configuration. All configured parameters are stored in a flash chip to save the setup information whenever the power is turned off. This chapter provides users with detailed description about how to set up basic system configuration through the AMI BIOS setup utility.

4.1 Starting

To enter the setup screens, follow the steps below:

1. Turn on the computer and press during the Power On Self Test (POST) to enter BIOS setup, otherwise, POST will continue with its test routines.
2. Once you enter the BIOS, the main BIOS setup menu displays. You can access the other setup screens from the main BIOS setup menu, such as the Advanced and Chipset menus.

Note

If your computer cannot boot after making and saving system changes with BIOS setup, you can restore BIOS optimal defaults by setting SW1 (see section 2.3.3).

It is strongly recommended that you should avoid changing the chipset's defaults. Both AMI and your system manufacturer have carefully set up these defaults that provide the best performance and reliability.

4.2 Navigation Keys

The BIOS setup/utility uses a key-based navigation system called hot keys. Most of the BIOS setup utility hot keys can be used at any time during the setup navigation process. These keys include <F1>, <F2>, <Enter>, <ESC>, <Arrow> keys, and so on.

Note

Some of the navigation keys differ from one screen to another.

Hot Keys	Description
→← Left/Right	The Left and Right <Arrow> keys allow you to select a setup screen.
↑↓ Up/Down	The Up and Down <Arrow> keys allow you to select a setup screen or sub screen.
Enter	The <Enter> key allows you to display or change the setup option listed for a particular setup item. The <Enter> key can also allow you to display the setup sub screens.
+– Plus/Minus	The Plus and Minus <Arrow> keys allow you to change the field value of a particular setup item.
F1	The <F1> key allows you to display the General Help screen.
F2	The <F2> key allows you to Load Previous Values.
F3	The <F3> key allows you to Load Optimized Defaults.
F4	The <F4> key allows you to save any changes you have made and exit Setup. Press the <F4> key to save your changes.
Esc	The <Esc> key allows you to discard any changes you have made and exit the Setup. Press the <Esc> key to exit the setup without saving your changes.

4.3 Main Menu

When you first enter the setup utility, you will enter the Main setup screen. You can always return to the Main setup screen by selecting the Main tab. System Time/Date can be set up as described below. The Main BIOS setup screen is shown below.

BIOS Information

Display the BIOS information.

Firmware Information

Display the firmware information.

System Date/Time

Use this option to change the system time and date. Highlight System Time or System Date using the <Arrow> keys. Enter new values through the keyboard. Press the <Tab> key or the <Arrow> keys to move between fields. The date must be entered in MM/DD/YY format. The time is entered in HH:MM:SS format.

Access Level

Display the access level of current user.

4.4 Advanced Menu

The Advanced menu also allows users to set configuration of the CPU and other system devices. You can select any of the items in the left frame of the screen to go to the sub menus:

- ▶ ACPI Settings
- ▶ Trusted Computing
- ▶ F81966 DIO Configuration
- ▶ CPU Configuration
- ▶ Storage Configuration
- ▶ NVMe Configuration
- ▶ AMT Configuration
- ▶ F81966 Super IO Configuration
- ▶ Hardware Monitor
- ▶ USB Configuration

For items marked with “▶”, please press <Enter> for more options.

- **F81966 DIO Configuration**

You can use this screen to select options for Digital I/O Configuration.

DIO Modification

Enable or disable digital I/O modification. The default is Disabled.

DIO port 1-8

Select this option to open DIO status sub-screen.

If DIO Modification is disabled, you are not allowed to change inputs/outputs setting. The DIO status sub-screen is as follows:

- **CPU Configuration**

This screen shows CPU information, and you can change the value of the selected option.

Hyper-Threading

Enable or disable Hyper-Threading Technology. When enabled, it allows a single physical processor to multitask as multiple logical processors. When disabled, only one thread per enabled core is enabled.

Intel (VMX) Virtualization Technology

Enable or disable Intel Virtualization Technology. When enabled, a VMM (Virtual Machine Mode) can utilize the additional hardware capabilities. It allows a platform to run multiple operating systems and applications independently, hence enabling a single computer system to work as several virtual systems.

Active Performance-cores

The number of cores to enable in each processor package.

Intel(R) Speed Shift Technology

Enable or disable Intel® Speed Shift Technology support. Enabling will expose the CPPC v2 interface to allow for hardware controlled P-states.

Turbo Mode

Enable or disable processor Turbo Mode (requires Intel® Speed Shift to be available and enabled).

- **Trusted Computing**

This screen provides function for specifying the TPM (Trusted Platform Module) settings.

Security Device Support

Enable or disable BIOS support for security device.

-The above screenshot shows the HW TPM support screen. (R680 SKU).

-The below screenshot shows the FW TPM support screen. (Q670E/H610 SKU).

- **ACPI Settings**

You can use this screen to select options for the ACPI configuration, and change the value of the selected option. A description of the selected item appears on the right side of the screen.

**ACPI Sleep State**

Select the ACPI (Advanced Configuration and Power Interface) sleep state. The S3 (Suspend to RAM) option selects ACPI sleep state the system will enter when suspend button is pressed.

- **Storage Configuration**

You can use this screen to select options for storage configuration, and change the value of the selected option. A description of the selected item appears on the right side of the screen. For items marked with "►", please press <Enter> for more options.

SATA Configuration

During system boot up, BIOS automatically detects the presence of SATA devices. In the SATA configuration menu, you can see hardware currently installed in the SATA port.

SATA Controller(s)

Enable or disable the SATA Controller feature.

Intel *VMD setup menu

Allows user to configure the VMD controllers.

Enable VMD controller

Enable or disable to VMD controller.

*Intel Volume Management Device

- NVMe Configuration**

This screen displays NVMe (Non-Volatile Memory Express) controller and drive information.

- F81966 Super IO Configuration**

You can use this screen to select options for the Super IO Configuration, and change the value of the selected option. A description of the selected item appears on the right side of the screen. For items marked with "►", please press <Enter> for more options.

Serial Port 1~4 Configuration

Use these items to set parameters related to serial port 1~4.

- Serial Port 1 Configuration**

Serial Port

Enable or disable serial port 1. The optimal setting for base I/O address is 3F8h and for interrupt request address is IRQ4.

Note

Serial Port 2~4

The optimal settings for base I/O address and interrupt request address are:

- Serial port 2: 2F8h, IRQ3
- Serial port 3: 3E8h, IRQ5
- Serial port 4: 2E8h, IRQ6

COM Port Type

Use this item to set RS-232/422/485 communication mode.

- **Hardware Monitor**

Monitors hardware health status.

This screen displays the temperature of system, cooling fans speed in RPM and system voltages (+5VDUAL, VCC_RTC, +5V, VS3V and VS5V).

- **Smart Fan Configuration**

Allows user to configure CPU fan and system fan mode.

Smart Fan Function

Enable or disable Smart Fan:

- Enable: Fan speed would change according to temperature.
- Disable: The fan always runs at full speed.

● **USB Configuration**

USB Devices

Display all detected USB devices.

● **AMT Configuration**

Use this screen to configure AMT parameters. (Only Supported Q670E & R680E version)

AMT BIOS Features

Enable or disable Active Management Technology BIOS features.

4.5 Chipset Menu

The Chipset menu allows users to change the advanced chipset settings. You can select any of the items in the left frame of the screen to go to the sub menus:

- ▶ System Agent (SA) Configuration
- ▶ PCH-IO Configuration

For items marked with “▶”, please press <Enter> for more options.

- **System Agent (SA) Configuration**

This screen allows users to configure System Agent (SA) parameters. For items marked with “▶”, please press <Enter> for more options.

Graphics Configuration

Open sub menu for parameters related to graphics configuration.

Memory Configuration

Open sub menu for information related to system memory.

• Graphics Configuration

Internal Graphics

Use this item to enable or disable the internal graphics controller. The default Auto setting uses the external graphics card in the PCIe slot as the primary display.

Primary Display

Use this item to select which graphics device (AUTO / IGFX / PEG / PCI / HG) will be used as the primary display, or select HG for Hybrid Graphics.

- **Auto:** The system will automatically select the available graphics device. By default, the external graphics card in the PCIe slot will be used as the primary display if detected.
- **IGFX:** Integrated Graphics. The default output priority is eDP first, followed by DP, and then HDMI.
- **PEG:** PCI Express Graphics. Refers to the external graphics card installed in the x16 PCIe slot (CN24).
- **PCI:** Graphics device connected through the PCH PCIe port, used as the primary display output on the x4 PCIe slot (CN7).
- **HG:** Hybrid Graphics. Allows both the integrated graphics and the external graphics card to work together, enabling hybrid display support.

• Memory Configuration

This screen displays the system memory information.

- **PCH-IO Configuration**

This screen allows you to set PCH parameters.

PCI Express Configuration

PCI-Express Configuration settings.

PCI Express Root Port 4(M.2 E Key)

Control the PCI-Express root port (M.2 E Key).

- M.2 B Key: R680E SKU only.

**PCIe Speed**

Allow user to configure PCI-Express speed.

ASPM

Sets the ASPM (Active State Power Management Settings) level:

- Force L0: Force all links to L0 state.
- Auto: BIOS auto configures.
- Disabled: Disables ASPM.

Hot Plug

Enable or disable PCI-Express Hot Plug.

Detect Non-Compliance Device

Enable or disable the detection of a non-compliance PCI-Express device in PEG.

HD Audio Configuration

HD Audio subsystem configuration settings.

**HD Audio**

Control detection of the HD Audio device.

- Disabled: HDA will be unconditionally disabled.
- Enabled: HDA will be unconditionally enabled.

4.6 Security Menu

The Security menu allows users to change the security settings for the system.

Administrator Password

Set administrator password. If only the Administrator password is set, it restricts access to BIOS Setup and is required only when entering Setup.

User Password

Set password. If only the User password is set, it acts as a power-on password and is required to boot or enter Setup. In Setup, the User has Administrator rights.

Secure Boot

Secure Boot

Secure Boot becomes active when it is enabled, the Platform Key (PK) is enrolled, and the system is in User Mode. A platform reset is required when changing modes. This feature ensures the system only boots from trusted software by verifying digital signatures of boot loaders, firmware, and operating systems. Users may enable or disable Secure Boot, and select between Standard or Custom mode.

Secure Boot Mode

Secure Boot mode options: Standard or Custom. In Custom mode, the policy of Secure Boot variables can be configured by a physically present user without full authentication.

Restore Factory Keys

Force the system into User Mode. Install factory default Secure Boot key databases.

Key Management

Enables expert users to modify Secure Boot Policy variables without full authentication.

4.7 Boot Menu

The Boot menu allows users to change boot options of the system.

- Setup Prompt Timeout**
 Number of seconds to wait for setup activation key. 65535(0xFFFF) means indefinite waiting.

- Bootup NumLock State**
 Use this item to select the power-on state for the keyboard NumLock.

- **Quiet Boot**

Select to display either POST output messages or a splash screen during boot-up.

- **Launch UEFI PXE OpROM policy**

Control the execution of UEFI PXE OpROM. When enabled, you may select LAN1 or LAN2 as PXE LAN port.

- **Boot Option Priorities**

These are settings for boot priority. Specify the boot device priority sequence from the available devices.

4.8 Save & Exit Menu

The Save & Exit menu allows users to load your system configuration with optimal or fail-safe default values.

- Save Changes and Exit**
 When you have completed the system configuration changes, select this option to leave Setup and return to Main Menu. Select Save Changes and Exit from the Save & Exit menu and press <Enter>. Select Yes to save changes and exit.
- Discard Changes and Exit**
 Select this option to quit Setup without making any permanent changes to the system configuration and return to Main Menu. Select Discard Changes and Exit from the Save & Exit menu and press <Enter>. Select Yes to discard changes and exit.
- Save Changes and Reset**
 When you have completed the system configuration changes, select this option to leave Setup and reboot the computer so the new system configuration parameters can take effect. Select Save Changes and Reset from the Save & Exit menu and press <Enter>. Select Yes to save changes and reset.
- Discard Changes and Reset**
 Select this option to quit Setup without making any permanent changes to the system configuration and reboot the computer. Select Discard Changes and Reset from the Save & Exit menu and press <Enter>. Select Yes to discard changes and reset.
- Save Changes**
 When you have completed the system configuration changes, select this option to save changes. Select Save Changes from the Save & Exit menu and press <Enter>. Select Yes to save changes.

- **Discard Changes**
Select this option to quit Setup without making any permanent changes to the system configuration. Select Discard Changes from the Save & Exit menu and press <Enter>. Select Yes to discard changes.
- **Restore Defaults**
It automatically sets all Setup options to a complete set of default settings when you select this option. Select Restore Defaults from the Save & Exit menu and press <Enter>.
- **Save as User Defaults**
Select this option to save system configuration changes done so far as User Defaults. Select Save as User Defaults from the Save & Exit menu and press <Enter>.
- **Restore User Defaults**
It automatically sets all Setup options to a complete set of User Defaults when you select this option. Select Restore User Defaults from the Save & Exit menu and press <Enter>.
- **Boot Override**
Select a drive to immediately boot that device regardless of the current boot order.

Watchdog Timer

A.1 About Watchdog Timer

Software stability is major issue in most application. Some embedded systems are not watched by human for 24 hours. It is usually too slow to wait for someone to reboot when computer hangs. The systems need to be able to reset automatically when things go wrong. The watchdog timer gives us solution.

The watchdog timer is a counter that triggers a system reset when it counts down to zero from a preset value. The software starts counter with an initial value and must reset it periodically. If the counter ever reaches zero which means the software has crashed, the system will reboot.

Digital I/O

B.1 Digital I/O Programming

- IOBASE: 0xEFA0
- Registers:
Command byte

Command	Protocol	Function
0	Read byte	Input port register
1	Read/write byte	Output port register
2	Read/write byte	Polarity inversion register
3	Read/write byte	Configuration register

The command byte is the first byte to follow the address byte during a write transmission. It is used as a pointer to determine which of the following registers will be written or read.

Register 0: Input port register.

This register is a read-only port. It reflects the incoming logic levels of the pins, regardless of whether the pin is defined as an input or an output by Register 3. Writes to this register have no effect. The default 'X' is determined by the externally applied logic level, normally '1' when no external signal is externally applied because of the internal pull-up resistors.

Bit	Symbol	Access	Value	Description
7	I7	Read only	X	Determined by externally applied logic level.
6	I6	Read only	X	
5	I5	Read only	X	
4	I4	Read only	X	
3	I3	Read only	X	
2	I2	Read only	X	
1	I1	Read only	X	
0	I0	Read only	X	

Register 1: Output port register.

This register reflects the outgoing logic levels of the pins defined as outputs by Register 3. Bit values in this register have no effect on pins defined as inputs. Reads from this register return the value that is in the flip-flop controlling the output selection, not the actual pin value.

Bit	Symbol	Access	Value	Description
7	O7	R	1*	Reflects outgoing logic levels of pins defined as outputs by Register 3.
6	O6	R	1*	
5	O5	R	1*	
4	O4	R	1*	
3	O3	R	1*	
2	O2	R	1*	
1	O1	R	1*	
0	O0	R	1*	

* : Default value

Register 3: Configuration register.

This register configures the directions of the I/O pins. If a bit in this register is set, the corresponding port pin is enabled as an input with a high-impedance output driver. If a bit in this register is cleared, the corresponding port pin is enabled as an output. At reset, the I/Os are configured as inputs with a weak pull-up to VDD.

Bit	Symbol	Access	Value	Description
7	C7	R/W	1*	Configure the directions of the I/O pins. 0 = Corresponding port pin enabled as an output. 1 = Corresponding port pin configured as input (default value).
6	C6	R/W	1*	
5	C5	R/W	1*	
4	C4	R/W	1*	
3	C3	R/W	1*	
2	C2	R/W	1*	
1	C1	R/W	1*	
0	C0	R/W	1*	

* : Default value

Appendix C

iAMT Settings

The Intel® Active Management Technology (Intel® AMT) utilizes built-in platform capabilities and popular third-party management and security applications to allow IT administrators to remotely discover, repair and better protect their networked computing assets, thus significantly improving IT management efficiency. Only Supported Q670E & R680E version

In order to use Intel® AMT you must enter the ME BIOS, change the ME BIOS password, and then select "Intel® iAMT" as the manageability feature.

D.1 Entering MEBx

1. Go to BIOS to enable the iAMT function.

2. After restarting BIOS, exit and enter MEBx Setting.

D.2 Set and Change Password

1. You will be asked to set a password when first logging in. The default password is "admin".
2. You will be asked to change the password before setting ME.
3. You must confirm your new password while revising. The new password must consist of eight characters, including at least:
 - One upper case
 - One lower case
 - One number
 - One special symbol, such as ! 、 \$ or ; , (、 " , excepted)

The default value demonstrates an example of a valid password: **!!11qqQQ**

Underline (_) and space are valid characters for password, but they won't make higher complexity.

D.3 iAMT Settings

Select Intel® iAMT configuration and press <Enter>.

1. Select Network Setup to configure iAMT.

2. Exit from MEBx after completing the iAMT settings.

D.4 iAMT Web Console

1. On a web browser, type [http://\(IP ADDRESS\):16992](http://(IP ADDRESS):16992), which connects to iAMT Web.

Example: <http://10.1.40.214:16992>

2. To log on, you will be required to type in username and password for access to the Web.

USER: admin (default value)

PASS: (MEBx password)

3. Enter the iAMT Web.

4. Click Remote Control, and select commands on the right side.

5. When you have finished using the iAMT Web console, close the Web browser.

Appendix D

TPM Settings

1. Setup BitLocker Drive Encryption main storage. Press <Win + R> and type "Control Panel", then select BitLocker Drive Encryption.

2. Insert an external storage device, for example USB Storage. Back up BitLocker recovery key in a new file and save it to the USB Storage.

3. Please follow the steps below to encrypt your storage device:

Now, the system prompts that the operating system drive encryption is in progress, and the encryption progress is checked.

Select and click the icon in the lower right corner to complete the encryption.

4. Confirm the completion of encryption.

5. Disable TPM function in BIOS Setup Utility.

6. When the system is powered on and you see the following screen, it means the TPM module function is working fine. Note that BitLocker cannot be executed if your system does not have TPM function.

Note

System with no TPM function support is as below:

1. **TPM information is not found in Device Manager.**

2. **When trying to turn on BitLocker, the following error message shows up.**

VMD(RAID) Configuration

How to Create Raid? (Only Supported Q670E & R680E version)

Step 1.

In SATA Configuration, Enabled VMD Controller and save&reset.

Enable VMD Global Mapping

Enable/Disable to VMD Global Mapping

RAID0

Enable/Disable RAID0 support

RAID1

Enable/Disable RAID1 support

Intel Rapid Recovery Technology

Enable/Disable Intel Rapid Recovery Technology

RRT volumes can span internal and eSATA drives

Enable/Disable RRT volumes can span internal and eSATA drives.

Intel(R) Optane(TM) Memory

Enable/Disable System Acceleration with Intel(R) Optane(TM) Memory feature.

Step2.

After Restart, enter del to Bios Setup Menu. In Advanced Page, choose Intel(R) Rapid Storage Technology.

Step3.

In Intel(R) Rapid Storage Technology page. Choose RAID Volume.

Step 4.

Select RAID Level, correspond to RAID Level in VMD Configuration.

Step 5.

Select the disk to be merged.

Step6.

Finally, implement create Volume.
